

SECTION SEVENTEEN

THE CONSISTENCY CHECK

Consistency isn't about being rigid. It's about keeping commitments. When you establish a rule, whether magic costs blood, teleportation is impossible, or lies are magically detectable, your readers trust that rule will hold. If you don't explain why you broke one of your rules, you're breaking their trust in you. Once that happens, every obstacle in your story starts to feel optional.

In romantasy, the temptation to break rules is constant. Your characters need to kiss. So now, the guards are no longer patrolling. Your characters need to be separated. So now, teleportation - which was possible before - just doesn't work. You want to raise the stakes. So now, the character who can read minds in chapter three simply forgot how to do that in chapter ten.

This is the "vibes vs. logic" problem: choosing what feels romantic over what would make logical sense in your world. Romantasy readers will put aside their scepticism to support a love story, absolutely. But they won't tolerate a world where events only occur when it's convenient for the characters to act upon them. As soon as a reader thinks "wait, can't she just use her magic to fix this?" you've lost them. Not because the question existed, but because you didn't provide an answer to it.

This section will help you test your worldbuilding's internal logic and identify any inconsistencies before they undermine your story. You've already developed all of your systems through every previous section. You now get to determine if the entire machine actually holds together.

The Promise Principle

Every single decision about worldbuilding is a promise to your readers. "Magic costs something." "Disobedience will get punished in this society." "Travel between these cities takes three weeks." "The bond cannot be broken." The promises you make set up the expectations, and the expectations you create represent the tension your romance depends on.

The Promise Principle is straightforward: your world's rules have as much strength as your willingness to follow through on them. If you state that using forbidden magic attracts hunters, but your protagonist uses forbidden magic without hunters showing up, you aren't just breaking a rule. You're telling your readers that your rules are just for show. And if your rules are just for show, so are the obstacles. When your obstacles are just for show, the romance has nothing at stake.

When Rhysand explains to Feyre in *A Court of Mist and Fury* the limits of winnowing (it drains energy, it leaves a trail, it gets worse when you carry someone else), he establishes an idea from the very beginning that holds true throughout the entire story. So when Feyre winnows because she's forced to, the price is real. She's tired, weak, and that weakness allows for a moment of real intimacy and trust because Rhysand has to catch her, steady her, keep her awake. If there were no costs associated with winnowing, this would simply be a way for Feyre to get somewhere quickly. But because there are, it became a moment of trust.

Romantasy authors who know how to create romance understand that it's the constraint that creates romance. The rule that states they can't be together is the same rule that gives their being together value. Your task isn't to remove the obstacle for your characters, it's to make the obstacle so real that their ability to overcome it is believable.

Common Mistakes

Mistake #1: The Selective Enforcement Problem

Your world's rules apply when you need tension and vanish when you need romance. Guards patrol during action scenes but disappear during stolen moments. Magic costs energy when it's dramatic but costs nothing when it's convenient. Political consequences loom during plot scenes but evaporate during romantic interludes. Readers track your rules even when they don't realise they're doing it. When consequences only apply selectively, every obstacle starts feeling manufactured. The forbidden relationship doesn't feel forbidden if the "enforcement" is a paper tiger. The dangerous magic doesn't feel dangerous if the cost keeps changing. And the political stakes don't feel real if they pause every time your leads need a quiet moment together.

FIX

Pick your three most important rules, the ones your romance depends on, and enforce them ruthlessly. Every single time. If guards patrol the corridors, they patrol during the love scene too, and your characters have to deal with that. If magic has a cost, it costs the same during a tender moment as during a battle. Consistent enforcement is what makes the moments your characters find *despite* the rules feel genuinely stolen.

Mistake #2: The Forgotten Ability

A character demonstrates a power or skill early in the story, then never uses it again. Especially when it would solve a problem the plot needs to exist. The telepath who never reads the villain's mind. The shapeshifter who forgets she can become invisible. The warrior who fights off ten soldiers in chapter five but loses to two in chapter fifteen with no explanation. It makes your reader do the work for you. Instead of being immersed in the emotional tension of a scene, they're sitting there thinking, "Why doesn't she just...?" Every single one of those pulls the reader out of the romance and into a logic puzzle. And the answer "because the author needed the plot to work this way" is never satisfying.

FIX

Keep a running list of every ability, power, and skill your characters demonstrate. Before every major scene, scan the list and ask: would any of these solve this problem? If yes, you need an in-world reason it doesn't work here. Magical interference, emotional distress blocking the ability, the specific conditions being wrong. Or you need to let the character try and fail, which honestly often creates better drama than pretending the ability doesn't exist.

Mistake #3: The Consequence Vacuum

Characters break established rules, laws, or taboos and nothing happens. The lovers are discovered in a compromising position in a society that punishes such things, and... the story moves on. Someone uses forbidden magic in front of witnesses and no one reports it. A character defies a direct order from their commander and faces no disciplinary action. If there are no consequences, there are no stakes. The entire architecture of "forbidden love" relies on the "forbidden" part being real. When readers see that rule-breaking carries no cost, they stop believing in the danger, and the romance loses its urgency. In *The Cruel Prince*, Jude's every act of defiance in the faerie court carries genuine risk, and the consequences of getting caught are specific and brutal. That's what makes her defiance feel brave rather than easy. *Use the table below to identify which mistakes are showing up in your current draft. Be specific about the scene or chapter where the problem occurs.*

Mistake	How It Shows Up in Your Story	Your Fix
Selective enforcement	Guards patrol the east wing in Ch. 3 but are completely absent when the leads meet there in Ch. 8, with no explanation	Add a scene in Ch. 7 where the guard rotation changes due to a festival, and have a minor character mention it
Forgotten ability	rules apply when convenient, disappear when not	character has a power that would solve the problem but doesn't use it
Consequence vacuum	rules are broken but nothing happens	

FIX

For every rule your characters break, write down the specific consequence that should follow. Then either let the consequence happen (which often creates richer story) or establish a clear, in-world reason it doesn't. A witness was bribed, a protector intervened, the evidence was destroyed. The consequence doesn't have to land immediately, but the *threat* of it should be present and the reader should be able to see why it didn't land this time.

The “Vibes vs. Logic” Problem

Identifying Vibes-Over-Logic Moments

Check if you’ve done any of these:

- ☐ Magic with strict rules suddenly works differently for a romantic moment
- ☐ Political danger that drives the plot pauses completely for romantic scenes
- ☐ Characters have privacy in places that should be public or monitored
- ☐ Consequences you’ve established don’t apply when protagonists break rules
- ☐ Worldbuilding obstacles disappear when they become inconvenient
- ☐ Characters forget abilities, knowledge, or resources that would help

How many did you check?

0-1: You’re probably fine.

2-3: Review these specific instances.

4+: You have a pattern to address.

Fixing Vibes-Over-Logic Problems

ISSUE

WHICH FIX

ISSUE

WHICH FIX

Part One: Testing Your Promises

You've built systems across every section of this workbook. Now you need to test whether those systems hold up under pressure, specifically the pressure of your romance plot. The following exercises walk you through each major system and ask one question: are the rules you established still standing?

You've already developed your magic system with sources, costs, limitations, and forbidden applications. This isn't an exercise in redesigning it. It's about checking whether your story actually respects what you built.

Magic Rules

(Reference: Your magic system section)

What are the 3-5 most important rules of your magic system?

These are the rules your plot depends on. If magic costs blood, write that down. If certain types of magic are forbidden, write that down. If there's a hard limit on what magic can do, write that down. These are the promises you've made to your reader.

RULE	WHERE IT'S ESTABLISHED	HAS IT HELD CONSISTENTLY?
<i>Winnowing costs energy and can be tracked (ACOMAF)</i>	<i>Ch. 4, Rhysand explains the cost</i>	Yes
1.		Yes / No
2.		Yes / No
3.		Yes / No
4.		Yes / No
5.		Yes / No

For any rule marked "No": Was there an in-world explanation for the exception, or did you just need it to work differently?

YOUR ANSWER

If the answer is “I just needed it to work differently,” you’ve got a consistency problem. Jump to the Fixing Consistency Problems section at the end of this part.

Political and Legal Rules

(Reference: Your government, power and law section)

Political rules create some of the most powerful obstacles in romance. But they’re only obstacles if they’re being followed. A law that forbids their union is nothing more than a piece of paper if there’s no consequence for breaking it.

What laws or political realities create the biggest obstacles for your romance?

LAW OR POLITICAL REALITY	WHAT HAPPENS IF IT'S BROKEN	HAS IT BEEN ENFORCED CONSISTENTLY?
<i>Humans cannot hold power in Elfhome (The Cruel Prince)</i>	<i>Execution or exile</i>	<i>Yes, which is why Jude's rise is so dangerous</i>
1.		Yes / No
2.		Yes / No
3.		Yes / No

Have your characters broken any of these laws?

If yes: did they face the stated consequences? If not, will readers accept the reason they didn't?

YOUR ANSWER

Social and Cultural Rules

(Reference: Your culture, customs and daily life section)

Cultural rules work differently from legal ones. No one arrests you for breaking a taboo, but the social stigma can be just as devastating. Your culture section established what's acceptable, what's shameful, and what's unforgivable. It's time to check whether those boundaries are still holding.

What cultural rules or taboos affect your romance most directly?

CULTURAL RULE OR TABOO	SOCIAL CONSEQUENCE FOR BREAKING IT	HAVE CHARACTERS BROKEN IT?	WAS THERE A REACTION?
<i>The Maiden must not be touched (FBAA)</i>	<i>Religious scandal, loss of Maiden status</i>	<i>Yes, Poppy and Hawke</i>	<i>Yes, multiple characters register the transgression</i>
1.		Yes / No	Yes / No
2.		Yes / No	Yes / No
3.		Yes / No	Yes / No

If a character breaks a taboo and no one reacts, readers notice. Even if the main characters get away with it temporarily, someone in the world should register that a line has been crossed.

Who in your world would notice the transgression, even if they don't act on it immediately? A servant, a rival, a parent, a religious figure?

YOUR ANSWER

Physical and Environmental Rules

(Reference: Your geography and technology sections)

Your geography section defined distances, travel times, and environmental dangers. Your technology section established what's easy and what's hard in your world. These physical constraints should stay consistent throughout your story.

What are the physical limitations that affect your romance?

Travel times, communication speed, environmental dangers, seasonal constraints, technological limits:

PHYSICAL LIMITATION	HOW IT AFFECTS YOUR ROMANCE	HAS IT REMAINED CONSISTENT?
<i>Three-week journey between Velaris and the Spring Court (ACOMAF)</i>	<i>Creates agonising separation; reunion carries emotional weight</i>	Yes
1.		Yes / No
2.		Yes / No
3.		Yes / No

Have any of these limitations stopped mattering when they became inconvenient?

If a journey that took weeks in chapter two takes days in chapter fifteen, you need a reason. New transportation? A shortcut that carries risk? Desperation overriding safety? Name the limitation and what changed.

YOUR ANSWER

Physical inconsistencies are among the easiest for readers to spot. If it takes three weeks to travel between cities in chapter two, it should still take three weeks in chapter twenty. Unless something has genuinely changed: new route, magical transportation, extreme urgency forcing dangerous shortcuts.

Religious Rules

(Reference: Your religion, myth and prophecy section)

Religious obstacles carry a specific weight because they're tied to identity, not just law. If your world's faith system creates obstacles for your romance, those obstacles should feel absolute and unyielding.

What religious rules, vows, or prohibitions affect your romance?

RELIGIOUS OBLIGATION	WHAT IT DEMANDS	WHAT BREAKING IT COSTS	HAS IT BEEN ENFORCED?
<i>The Maiden's vow of purity (FBAA)</i>	<i>No physical contact, no pleasure, no romantic attachment</i>	<i>Loss of divine status, endangers the kingdom's protection</i>	<i>Yes, consistently until the reveal changes the reason</i>
1.			Yes / No
2.			Yes / No

Is the religious obstacle treated with the same weight throughout?

A vow that feels absolute in chapter one but gets waved away in chapter fifteen is a broken promise. If the obstacle lessens, there should be a story reason for it: a crisis of faith, a doctrinal revelation, a divine intervention that changes the rules.

YOUR ANSWER

Fixing Consistency Problems

If you answered “No” to any of the questions above, you now have three options to consider:

Option 1: Add an in-world explanation. Prior to the scene with the violation, show how the exception exists in your story world. If magic functions differently in a specific location, give some sort of hint about it prior to the scene. If there are no guards present, show what happened to them: a distraction, another area was breached, someone paid a guard off. Your readers need to see the reason *before* they need to know it.

Option 2: Let the consequence happen. This is usually my favourite option, honestly. Let them get caught. Let their failure to follow the rules become a plot point instead of a convenient way out. In *A Court of Thorns and Roses*, Feyre's mistakes Under the Mountain have serious consequences. She doesn't receive a free pass simply because she's the protagonist. And each consequence raises the stakes for the next trial.

Option 3: Change the rule from the start. If you're always breaking a rule, perhaps the rule itself is flawed. By making the rule less restrictive from the onset, you won't have to continually circumvent it. A consistently maintained rule is far stronger than a strict rule you frequently break.

For each consistency problem you identified:

THE PROBLEM	WHICH FIX	WHAT NEEDS TO CHANGE
	Option 1 / 2 / 3	
	Option 1 / 2 / 3	
	Option 1 / 2 / 3	

Part Two: The Scene-Level Tests

All of the previous exercises were theoretical. These next ones apply your rules to specific scenes, the actual moments where consistency problems show up on the page.

The “Would This Actually Happen?” Test

Pick a key romantic scene, one where the characters are together in a way that your world’s rules should make difficult, and interrogate it.

Describe the scene:

DESCRIBE THE SCENE:

Apply your rules:

QUESTION	YOUR ANSWER	IF "NO," WHAT NEEDS TO CHANGE?
Given your magic system, would this scene be possible?		
Given your political/legal system, is this scene safe?		
Given your cultural rules, would these characters do this here?		
Given your environmental constraints, could they physically be here?		
Given surveillance (magical or mundane), would they be undetected?		
Given other characters' knowledge and abilities, would no one intervene?		

If you answered "no" to any of those, you don't necessarily have to change the scene. But you do need to address why the rule doesn't apply here. And "because I needed this scene to happen" is not a valid answer.

The Reversal Test

For the same scene:

What would actually happen if they were caught?

Be specific. Not “it would be bad” but the actual consequence: imprisonment, forced separation, public shaming, magical punishment, death. The more concrete the consequence, the more tension the scene carries.

YOUR ANSWER

Who would catch them, and why haven't they?

Name the specific character or group. A guard, a rival, a parent, a magical ward. Then explain why that person or system hasn't intervened yet.

YOUR ANSWER

Is there a good in-world reason they don't get caught? A lookout, a shift change, concealment magic, a distraction, an ally covering for them? Or are you just protecting them?

YOUR ANSWER

If you're protecting them, then provide a valid reason as to why, established before the scene and not invented in the moment. Alternatively, let them get caught and deal with the fallout. It can create better storytelling if they're caught versus if they successfully avoid detection.

The Ability Audit

List your protagonist's key abilities:

LIST YOUR PROTAGONIST'S KEY ABILITIES:

List your love interest's key abilities:

LIST YOUR LOVE INTEREST'S KEY ABILITIES:

For each major scene of conflict or tension, check:

SCENE	COULD ANY LISTED ABILITY SOLVE THIS?	IF YES, WHY DOESN'T IT?	IS THAT REASON ESTABLISHED IN THE TEXT?
<i>Feyre trapped Under the Mountain (ACOTAR)</i>	<i>Yes, her emerging powers could help</i>	<i>She doesn't yet know she has them; Amarantha's magic suppresses most Fae abilities</i>	<i>Yes, both established</i>
			Yes / No
			Yes / No
			Yes / No

Valid reasons an ability doesn't work: magical interference, emotional distress, wrong conditions, the cost is too high, using it would reveal a secret, the character doesn't yet know they can do this. Invalid reasons: the character forgot, the author needed them not to.

The Convenience Check

Powers and Abilities

Do abilities remain consistent in power level throughout your story?

A character who defeats ten soldiers in chapter five but struggles against two in chapter fifteen needs an in-world explanation for the shift. If power levels fluctuate without reason, readers lose trust in every obstacle — including the ones keeping your leads apart.

YOUR ANSWER

Does anyone conveniently forget an ability that would solve the current problem?

This is especially damaging in romantic tension scenes. If a telepath could just read the love interest's mind and resolve the misunderstanding, readers will wonder why they don't. You need a reason the ability doesn't work here — emotional interference, magical shielding, or the cost being too high to risk.

YOUR ANSWER

Environmental Consistency

Map key locations and travel times:

FROM	TO	TRAVEL TIME

Have you changed these times for plot convenience?

If a three-week journey suddenly takes three days because your leads need to reunite, readers will notice. Physical distance is one of romantasy's most effective tools for building longing — but only if it's consistent.

YOUR ANSWER

Do environmental dangers remain consistent?

A forest that's deadly in chapter two should still be deadly in chapter eighteen. If your characters cross it safely later, there should be a reason: they've gained knowledge, protection, or allies that weren't available before. Environmental dangers that vanish when they're inconvenient undermine the sense that your world is real.

YOUR ANSWER

Authority and Surveillance

Where do authority figures and surveillance systems appear in your story, and are they consistent?

Guards, wards, spies, magical monitoring, parental oversight — whatever enforces the rules in your world. Track where they're present, where they're absent, and whether the absence has a reason. If authority disappears precisely when your characters need privacy, readers will notice. Selective enforcement is one of the fastest ways to make a forbidden romance feel unforbidden.

AUTHORITY/ SURVEILLANCE SYSTEM	SCENES WHERE IT'S PRESENT	SCENES WHERE IT'S ABSENT	IS THERE AN IN- WORLD REASON FOR THE ABSENCE?
<i>Court guards on the east wing (The Cruel Prince)</i>	<i>Jude's daily commute, the duel scenes</i>	<i>Jude and Cardan's confrontation in Ch. 12</i>	<i>Yes — the guards were called to the Bomb's distraction</i>
1.			Yes / No
2.			Yes / No
3.			Yes / No

For any “No”: this is a selective enforcement problem. Jump to the Fixing Consistency Problems section and apply one of the three options.

Part Three: Romance Under Pressure

One of the biggest consistency issues in romantasy isn't actually a broken rule. It's the fantasy plot stopping dead so the romance can happen. This isn't necessarily a logical flaw; it's more of a pacing issue that feels like a consistency problem because the outside forces of the world are somehow magically turned off to make room for their love.

The Timeline Test

Outline your major fantasy plot points alongside your romantic beats:

Map these side by side. If your romantic beats cluster in "quiet" chapters between plot events, you might have a pacing problem disguised as a consistency problem.

FANTASY PLOT POINT	ROMANTIC BEAT	ARE THEY HAPPENING SIMULTANEOUSLY?
<i>Violet must survive the Gauntlet (Fourth Wing)</i>	<i>Xaden saves her life, forcing reluctant trust</i>	<i>Yes, the romance IS the plot event</i>
1.	1.	Yes / No
2.	2.	Yes / No
3.	3.	Yes / No
4.	4.	Yes / No
5.	5.	Yes / No

Does the fantasy plot stop advancing when the romance heats up?

The dark lord doesn't pause his march because your protagonists need a three-chapter relationship arc. If the external threat exists, it should be pressing during romantic moments too, not waiting politely outside.

YOUR ANSWER

Do romantic beats happen during plot events or in pauses between them?

The strongest romantasy weaves them together. First kiss while hiding from enemies. Confession after surviving battle. Argument because they disagree on strategy. Intimacy when they might die tomorrow. If your romantic moments only happen in calm, consequence-free pockets, they're not integrated with your story. They're interrupting it.

YOUR ANSWER

The Pressure Test

For each major romantic moment, what external pressure is active?

ROMANTIC MOMENT	ACTIVE EXTERNAL PRESSURE	IF NONE, WHAT COULD YOU ADD?
<i>First kiss (ACOMAF)</i>	<i>Feyre and Rhysand are mid-mission, surrounded by political danger; Amarantha's legacy still threatens both courts</i>	<i>N/A, pressure is active</i>

*Romance under pressure is more compelling than romance in a vacuum. You don't need a sword fight during every kiss, but the reader should feel that the world hasn't stopped just because your characters are having a moment. You see this beautifully done in *Fourth Wing*, where Violet and Xaden have their most passionate moments happening while there's still action going on around them. They're fighting war games, assassins are trying to kill them, he's revealed his rebellion... but the threat from the outside world never ceases. Their romance develops *as a result* of the pressure, not in spite of it, and each stolen moment holds the weight of the possibility that "this could be the last time."*

The Dual Clock

The story you're telling needs to run two clocks: one for the fantasy plot, one for the romance. Ideally, the two clocks need to intersect or merge.

Your fantasy plot deadline:

(War reaches the city, curse takes effect, prophecy deadline passes, trial concludes, army arrives)

YOUR ANSWER

Your romantic plot deadline:

(Point of no return for the relationship, final choice about each other, moment after which nothing can be the same)

YOUR ANSWER

Do these deadlines converge?

The strongest romantasy climaxes fuse these deadlines. Must defeat the enemy together, which requires trust they haven't built. Must break the curse by admitting love. Political marriage deadline is also war deadline. Confession must happen before a battle they might not survive.

YOUR ANSWER

If deadlines are separate, can you align them?

Separate deadlines create the “two stories in one book” problem. If your fantasy climax and your romantic climax happen at different times, one will feel like an afterthought. Look for ways to make the romantic choice and the fantasy choice the same choice.

YOUR ANSWER

If your deadlines don't converge yet, use this to find the connection:

Most romantasy deadlines can be fused by making the romantic choice necessary for the fantasy resolution, or vice versa. Look for the point where what the character must do for the world requires them to confront what they feel for each other.

What is your fantasy plot deadline and your romantic plot deadline? Do they converge?

If not, what point could fuse them – where would the romantic choice and the fantasy choice become the same choice?

(Write your answer below)

Part Four: Character Knowledge and Information

Most romantasy is written in first person or close third person, which means your reader only has access to what your narrator sees. This can be one of your most powerful tools for building tension, but it's also one of the easiest places to break consistency. This section covers two related challenges: tracking what your characters know (and

when they know it), and maintaining worldbuilding consistency when your narrator's understanding of the world is incomplete or flat-out wrong.

Mishandled information is probably the fastest way to break consistency. Characters who know things they shouldn't, don't know things they should, or conveniently fail to share critical information all create problems that pull readers straight out of the story.

What does your protagonist know, and when did they learn it?

Focus on information that affects the romance: secrets about the love interest, knowledge that would change how they feel, facts that could bring them together or tear them apart.

KEY INFORMATION	WHEN THEY LEARNED IT	HOW THEY LEARNED IT
<i>Poppy learns Hawke is actually Casteel (FBAA)</i>	<i>End of Book One</i>	<i>He reveals it during the kidnapping</i>

What does your love interest know, and when did they learn it?

Your love interest's secrets are often the engine of the romantic tension. Track them just as carefully.

KEY INFORMATION	WHEN THEY LEARNED IT	HOW THEY LEARNED IT
<i>Casteel knows Poppy is the Maiden from the start (FBAA)</i>	<i>Before the story begins</i>	<i>Intelligence from his kingdom</i>

Information asymmetry between your leads:

This is where romantic tension lives. Every secret one character holds creates a power imbalance, and every reveal shifts the dynamic.

WHAT PROTAGONIST KNOWS THAT LOVE INTEREST DOESN'T	WHAT LOVE INTEREST KNOWS THAT PROTAGONIST DOESN'T
<i>Feyre knows she's spying for Tamlin at the Night Court (ACOMAF)</i>	<i>Rhysand knows they're mates before Feyre does</i>

Information asymmetry is romantic fuel. Secrets, hidden identities, concealed feelings, knowledge that would change everything if shared. But it only works if the reason for keeping quiet is solid.

The Reveal Check

Your major revelation or secret:

The secret that, once revealed, changes the romantic relationship. A hidden identity, a concealed motive, a truth about the world that reframes everything between them.

YOUR ANSWER

Could this character have figured this out earlier?

Good reasons they didn't: they were deliberately avoiding the truth, the information was genuinely hidden, they had no reason to look, cultural assumptions blinded them, someone actively concealed it.

Bad reasons: they just didn't think to ask, the plot needed them not to know yet.

YOUR ANSWER

Does any character act on information they shouldn't have yet?

This is especially common with love interests who have secret knowledge. Does your love interest react to a threat before the protagonist has told them about it? Does a character show jealousy about something they shouldn't know yet?

YOUR ANSWER

The Misunderstanding Check

Your major misunderstanding:

The belief, assumption, or missing piece of information that keeps your leads apart. What does one character believe about the other that's wrong, and what would change if they knew the truth?

YOUR ANSWER

Why don't they just talk to each other?

This is the question your readers will ask. "Just TALK to each other!" is one of the most common reader frustrations with romance. Your answer needs to be specific, concrete, and rooted in your world.

REASONS THAT WORK	REASONS THAT DON'T
Cultural taboo against directness	Just didn't think to ask

REASONS THAT WORK	REASONS THAT DON'T
Fear of rejection so deep it's paralyzing	Plot needs them not to know
Asking would reveal a dangerous secret	Avoiding conversation for drama
No privacy to have the conversation	Characters being unnecessarily obtuse
Magical compulsion prevents honesty	Author needed conflict to continue
The question itself is dangerous to ask	"Miscommunication" with no real barrier
Asking means admitting vulnerability they can't afford	

Which applies to your story?

WHICH APPLIES TO YOUR STORY?

If they could resolve the misunderstanding with a single honest conversation and nothing is preventing that conversation from happening, readers will get frustrated. The barrier to communication needs to be as real as any other obstacle in your world.

When Your Narrator Doesn't Know the Rules

The most surprising consistency challenge for a lot of romantasy writers is this: your narrator believes something about the world that isn't true, and you need the reader to accept that wrong belief while you maintain the actual rules underneath.

This isn't a flaw. It's one of the most powerful tools in romantasy. Feyre believes the Night Court is a place of pure cruelty. Poppy believes the Ascended are holy. Violet believes venom are myths. Jude believes her geas makes her invulnerable to all faerie magic. Each of those beliefs is wrong, and each of them is *consistent with what the character has been told and has experienced*. That's the key. A wrong interpretation has to be just as internally logical as the correct one.

To make this work, you need to maintain two layers at the same time. Think of it as the clock and the glass. The clock is the truth: the actual rules of your world, the real history, how the magic genuinely works. The glass is what your narrator sees when they look at the clock. It's distorted, tinted, sometimes cracked, but it's not random. The distortion comes from somewhere specific: their upbringing, their trauma, their religion, the propaganda they've been fed, or simply the fact that they're human in a world of immortals. Your reader views the world through the same glass your narrator does. When the glass finally shatters and the reader gets a clear view of the clock, every hand should still be in the right place.

The Author's Truth vs. The Narrator's Bias

Your world is governed by objective rules that are operational regardless of whether your narrator knows they exist or not. Your narrator will have a unique, subjective interpretation of those rules depending on who they are as an individual. What remains constant is that the narrator's *observations* don't change from being correct even if the *conclusions* they draw from those observations are wrong.

The Court of Nightmares scene in *A Court of Mist and Fury* shows this beautifully. Feyre observes Rhysand behaving with calculated cruelty in Hewn City, pulling her onto his lap, treating her as if he owns her. Based upon her observation, she concludes he's the monster everyone says he is. But her observations were also correct. While Rhysand performs in front of Feyre with the intent of humiliating her in public, at the same time he checks in with her through their telepathic connection to ensure she consents, and explains why he needs her to perform in this particular way. The truth (Rhysand's devotion) existed within the scene through the telepathic layer. The bias (Feyre's fear) existed through the physical layer. Both layers remained consistent. Because of this the reader doesn't feel betrayed when Velaris is eventually exposed, because the clues were all there the whole time. They simply perceived them the way that Feyre did.

Four Ways to Maintain Consistency Through an Unreliable Lens

1. Sensory dissonance.

Have your narrator's physical responses reflect what their mind has yet to accept. Throughout *From Blood and Ash*, the author repeatedly tells us the Ascended have an unnatural chill to them when touched, and a "hollow" feeling in their chest. Poppy explains these feelings as being due to divine transcendence. We file it away for now. At some point the Ascended are shown to be parasitic vampyres. Those sensory descriptions suddenly fit together. Poppy had sensed the truth, but she didn't recognise it as such. So if your narrator's senses are consistently picking up something "off" about a particular person, a location, or a ritual, that's a thread your readers will also be noticing, long before you know where it's going.

2. Anchor rules.

Develop at least one rule that works in the exact same manner every time regardless of what your narrator thinks about it. Throughout the ACOTAR series, the mating bond

tugs and pulls in spite of whether the characters are aware of it, fully comprehend it, or outright hate it. In *Fourth Wing*, a dragon's choice is absolute, and none – neither generals nor professors nor parents – can alter it. These anchors give your readers something to latch onto while the narrator may be changing their understanding of things. The anchors don't change with the narrator's new understanding of how things work. They've always worked the same way.

3. Semantic misdirection.

Misdirect by using your world's own terms to describe the truth in plain sight. Ascension, in *From Blood and Ash*, is a term for an event depicted as sacred and beautiful to Poppy. It's a death sentence to the reader who eventually finds out what really happened. But the words themselves never lied; they were always describing the exact same rite. It's the definition of the term that changes based on who defines it. Likewise, "the Maiden must remain pure" doesn't sound like a livestock control measure, but it's exactly that. There's no inconsistency with the rule (the Maiden must be veiled and untouched). The only difference is the reasoning behind the rule.

4. Physical tell-tale signs.

Describe the truth with some physical characteristic, and then describe how your narrator misinterprets that characteristic. In *Fourth Wing*, there's a red ring around Jack Barlowe's eyes when he becomes angry. Violet assumes that's because of his dragon, but it turns out that's a biological sign of a venom who has begun to draw power from the earth. In *The Cruel Prince*, faerie fruit is described as being both intoxicating and addictive to mortals. When Valerian forces a faerie apple into Jude's mouth, she believes her geas will protect her from the effects. What really happened is that the biological properties of the faerie fruit caused a reaction that occurred outside of the geas' coverage. All of the rules are consistent. Jude was simply arrogant enough to believe that one protection would cover everything.

Planning Your Unreliable Lens

If your narrator's understanding of the world is going to shift, you need to plan how the truth leaks through before the reveal. Use the table below to map which techniques you're using and where.

TECHNIQUE	WHAT THE NARRATOR PERCEIVES	WHAT'S ACTUALLY HAPPENING	WHERE IT APPEARS IN YOUR STORY
<i>Sensory dissonance (FBAA)</i>	<i>Poppy feels the Ascended are unnaturally cold</i>	<i>They're undead parasites, not divine beings</i>	<i>Multiple early scenes where she touches or stands near them</i>
Sensory dissonance			
Anchor rule			
Semantic misdirection			
Physical tell-tale sign			

You don't need all four. One or two, used consistently, is enough. The key is that the technique shows up more than once before the reveal, so readers can look back and see the pattern.

The Recontextualisation Test

When your narrator's understanding shifts (they learn the truth about a character, a system, or a history), earlier scenes should gain new meaning without losing their original logic.

Your major reveal or shift in understanding:

YOUR MAJOR REVEAL OR SHIFT IN UNDERSTANDING:

Pick two earlier scenes that will be recontextualised by this reveal:

EARLIER SCENE	WHAT IT MEANT BEFORE THE REVEAL	WHAT IT MEANS AFTER	DO BOTH INTERPRETATIONS FOLLOW FROM THE EVIDENCE IN THE SCENE?
<i>Rhysand at Calanmai (ACOTAR)</i>	<i>A predatory stranger claiming Feyre</i>	<i>A man finding his mate and trying to scare her to safety</i>	<i>Yes, his behaviour is consistent with both readings</i>
			Yes / No
			Yes / No

If the “after” interpretation doesn’t follow from what was actually on the page, you need to go back and seed the evidence. More on how to do this in Part Seven.

Does your narrator’s wrong belief come from a specific, identifiable source?

Upbringing, religious teaching, propaganda, trauma, cultural assumption, biological limitation? The more specific the source of the blindness, the more satisfying the reveal.

SOURCE OF THE NARRATOR'S WRONG BELIEF	WHAT THEY BELIEVE	WHAT'S ACTUALLY TRUE	WHEN DOES THE GLASS BREAK?
<i>Religious indoctrination (FBAA)</i>	<i>The Ascended are divine protectors</i>	<i>They're parasitic vampyres</i>	<i>When Poppy sees the truth about what "Ascension" actually does</i>

The gold standard is when a reader finishes your reveal and immediately wants to reread the early chapters. Not because they feel tricked, but because they know the experience will be richer the second time.

Part Five: The Internal Logic Test

For any major plot event, especially your climax and major turning points, apply this three-part test:

1. The Setup Test

Was this possibility established earlier?

**Romantasy climaxes frequently involve a magical or emotional turning point: either a new ability surfaces, a bond activates, or a sacrifice becomes possible. If there wasn't some form of setup that led to this moment, then the breakthrough will feel like cheating. If there was, it feels like destiny.*

It's at this point that many romantasy climaxes fail. While the power of love is real in your genre, it still needs to follow the rules and logic you established through the system you created. "Love conquers all" is an emotional truth; it can't be a magical get-out-of-jail-free card.

This question is important in romantasy twice: once in terms of the fantasy plot decision and again in terms of the romantic one. Will your protagonist really make such a sacrifice at this point? Would your love interest really betray their own people for this particular individual? The answers need to come from the character's development arc, rather than what the plot requires.*

Not what you need them to do. What they would actually choose, based on their established personality, their current knowledge, and their emotional state.

YOUR ANSWER

Apply all three to your climax or major turning point:

The Setup Test asks: was this possibility established earlier in the story? The Rules Test asks: does this event follow the magical, political, and physical rules you've built? The Character Test asks: would this character actually make this choice, given everything we know about who they are and what they've been through?

	YOUR EVENT	PASS OR FAIL?	IF FAIL, WHAT NEEDS TO CHANGE?
Setup Test			
Rules Test			
Character Test			

If you fail any test, you've got a consistency problem. But the fix isn't always changing the event. Sometimes it's adding earlier setup, adjusting the rules, or deepening the character work that leads to this moment.

Part Six: When to Break Your Own Rules

Once in a while you need to break a rule. But being willing to do that has to have intent behind it, and planning for setup and consequence.

1. The break is the point.

Every element of the story builds to this one moment when the impossible becomes possible. The unbreakable mating bond breaks. The magic that always costs blood works at no cost, for this time only, and the characters have no idea why. If your story has built up enough momentum to earn this moment, the rule-break feels like a reveal, not a cheat.

2. There's an in-world explanation.

You had an exception previously, or the rule-break reveals new information about how things actually work. The magic didn't really break its rules; you just didn't know all the rules yet. This is especially true of romantasy with a mystery-driven plot.

3. The consequence is severe.

The rule-break results in a cost that increases the complexity of the story, not reduces it. The character who breaks the magical law gets what they needed, but they lose something else as a result. The impossible act succeeds, but it now presents a greater problem than the original. Rule-breaking that produces additional complications is always far more interesting than rule-breaking that resolves them.

Have you intentionally broken a rule?

The best rule-breaks in romantasy serve the love story. The impossible becomes possible because of the bond, the sacrifice, or the choice to love. That's earned. The impossible becoming possible because you needed a happy ending is not.

THE RULE	WHY YOU BROKE IT	WHAT MAKES IT JUSTIFIED	WHAT CONSEQUENCES FOLLOW
<i>Nesta's death magic is irreversible (ACOSF)</i>	<i>She gives it back to the Cauldron to save Feyre and the baby</i>	<i>It's a sacrificial choice rooted in love, set up by her entire character arc</i>	<i>She loses her power permanently; must rebuild her identity without it</i>

What Readers Forgive (and What They Don't)

Not all inconsistencies have the same impact on your reader. Knowing which ones readers absorb and which ones eject them from the story helps you prioritise where to spend your consistency efforts.

Readers forgive inconsistencies that serve emotion *if you've earned their trust* through generally consistent worldbuilding. They won't forgive inconsistencies that feel like cheating, where you're protecting characters from your own rules or making things easy when they should be hard.

Ask yourself: Am I bending rules to serve the story, or breaking them to avoid consequences I don't want to write?

YOUR ANSWER

Categorise your known inconsistencies:

Be honest. List every inconsistency you're aware of and sort it. The "forgivable" column isn't a free pass; it's a triage tool. Fix the unforgivable ones first, then decide which forgivable ones are worth fixing anyway.

THE INCONSISTENCY	FORGIVABLE OR UNFORGIVABLE?	WHY?	ACTION: FIX, FLAG FOR REVISION, OR ACCEPT?
<i>Travel time between cities varies by a day or two (minor)</i>	<i>Forgivable</i>	<i>Not plot-critical; emotional pacing matters more</i>	<i>Accept</i>
<i>Protagonist's telepathy could have solved the misunderstanding in Ch. 9</i>	<i>Unforgivable</i>	<i>Readers will ask "why didn't she just read his mind?"</i>	<i>Fix: add a reason the ability doesn't work here</i>

Part Seven: Fixing What You've Already Written

You've completed your tests and discovered the areas where you have issues. What do you do next?

Many writers find their consistency problems in the middle of drafting or revising, rather than at the initial planning stages. The instinct is to panic and rewrite the entire thing from scratch. Don't. Writers who write romantasy are faced with these kinds of consistency issues on a regular basis and have created methods for resolving them without disrupting the flow of their stories. The intent here isn't to create an illusion that all your writing plans were made in advance. It's simply to create the illusion that they were.

The single most practical method for fixing consistency problems: go back and plant the evidence you need, so the later payoff feels earned.

In Rebecca Yarros' *Iron Flame*, she reveals that Andarna is the seventh breed of dragon, capable of killing venom with both her teeth and fire. Readers needed to feel as though that was foreshadowed. In revising *Iron Flame*, Yarros appears to have added several subtle physical cues to the early text: colour changes that Violet dismissed as being due to adolescence, as well as minute behaviour characteristics that didn't exactly fit into the previously established dragon breeds. Those little details lay dormant in the manuscript until the big reveal made them meaningful.

The method operates as follows:

1. **Determine what must be revealed about the climax or turning point in order for it to be believable.** What new rule, ability, or truth needs to feel earned?
2. **Return to approximately 15 to 20 percent of the way through your manuscript.** Most readers settle into the story here and begin trusting the rules.
3. **Insert a small, non-important piece of information that hints at the truth.** An off-hand comment from someone in dialogue, a physical anomaly that your main character notices but doesn't yet understand, a question that goes unanswered.
4. **Include another detail somewhere near the midpoint of your manuscript.** The detail should reappear, but not so as to cause the reader to suspect the true nature of things. It should remain explainable based upon your character's current (and incorrect)

Where in your manuscript does the truth need to land?

WHERE IN YOUR MANUSCRIPT DOES THE TRUTH NEED TO LAND?

Where can you plant the first hint? (Aim for 15-20% into the manuscript)

WHERE CAN YOU PLANT THE FIRST HINT? (AIM FOR 15-20% INTO THE MANUSCRIPT)

Where can you add a second reference? (Aim for the midpoint)

WHERE CAN YOU ADD A SECOND REFERENCE? (AIM FOR THE MIDPOINT)

Is there a scene where the character can struggle with or fail at this element before it becomes critical?

IS THERE A SCENE WHERE THE CHARACTER CAN STRUGGLE WITH OR FAIL AT THIS ELEMENT BEFORE IT BECOMES CRITICAL?

The Ignorance Shield

It's possible the problem with the lack of consistency in your story isn't that there are broken rules. It may just be that your world has grown beyond what you originally envisioned. The simplicity of your original magic system will need to grow into complexity, and the clarity of your mythology may become layered in ways you never anticipated. As well, your protagonist's parentage, heritage, or nature will likely have changed since you started drafting.

The Ignorance Shield provides a way to approach your early worldbuilding by framing it as your narrator's limited understanding, rather than the objective truth. When your protagonist was either sheltered and isolated from the rest of the world or received education from institutions with their own biases and agendas, and/or was fed deliberately deceitful propaganda, then all of the things they "knew" in the early chapters were distorted through that prism. When your protagonist learns something new that changes how they understand their world, that new knowledge won't contradict anything from the earlier chapters. It'll simply expose the fact that those earlier chapters were showing them lies.

One of Jennifer L. Armentrout's greatest uses of this tool is throughout her *From Blood and Ash* series. Poppy's perception of the Ascended begins as "divine chosen ones", evolves into "parasitic vampyres", and ultimately becomes a discovery that the entire theological construct of her world was created to keep people complacent. Every time

Poppy discovers something new, she doesn't discover something that contradicts what she already believed. She only finds out why she previously believed it. The rule "the Maiden must remain pure" was always consistent; only the reason behind it changed.

As effective as this tool can be, it also has its limits. If you overuse it, readers will begin to feel like the ground beneath their feet is constantly shifting, and they'll have nowhere to stand firm. Every additional "everything you knew was a lie" moment diminishes the impact of the previous ones. In some of Armentrout's later books, the ancestry revelations escalated to such a degree (Maiden to half-Atlantian to deity to Primal) that the reactions from readers became increasingly varied and less positive, largely because there wasn't enough emotional connection between each shift.

The rule: One major Ignorance Shield reveal per book. Maybe two, if the second is smaller and more personal. Beyond that, readers lose trust in the world entirely, which is the opposite of what you're going for.

WHAT YOUR NARRATOR BELIEVED EARLY ON	WHAT'S ACTUALLY TRUE	IS THE EARLY BELIEF LOGICAL GIVEN THEIR BACKGROUND?	DOES THE REVEAL ADD EMOTIONAL DEPTH OR JUST COMPLEXITY?
<i>Poppy believes "Ascension" is divine transcendence (FBAA)</i>	<i>It's parasitic death</i>	<i>Yes, she was raised by the Ascended themselves</i>	<i>Depth: reframes every relationship she's ever had</i>
		Yes / No	Depth / Complexity
		Yes / No	Depth / Complexity

If you answered “just complexity,” have a think about whether the reveal is serving the story or just making the mythology bigger. Bigger isn’t better. Deeper is better.

Linguistic Literalism

Your writing will likely create a situation where a character says something that, upon reflection, shouldn’t have been possible under your own rules about what that character is allowed to say. Holly Black’s handling of faerie truth-telling in *The Cruel Prince* provides the fix.

In Holly Black’s *Elfhame*, faeries can’t tell lies. This is a mechanical, absolute rule. But they can also mislead by using questions as opposed to statements, not answering when a question is asked, and using a series of technically correct but deeply deceptive phrasings. If a faerie was asked where a prisoner is being held, their response could be: “Why would I keep such a wretched creature in my own house?” The above response isn’t a lie (the faerie didn’t say anything that was untrue), but the listener will assume based on the faerie’s question that the prisoner isn’t being kept there.

If you come across a character who’s said something in your manuscript that wasn’t truthful according to the rules you established, don’t alter the rules you created. Instead, change how the character said what they said.

Using this technique, a limitation you establish through worldbuilding becomes a major reason why readers enjoy fantasy. People enjoy trying to decipher faerie language, loophole-hunting in mate bonds, and wordplay in prophecies because these provide readers with the feeling of participating in the narrative.

Do any of your characters operate under a speech or honesty constraint?

Fae who cannot lie, bond-linked characters who sense deception, oath-bound warriors, prophets who can only speak truth. If any character in your story has a speech constraint, every line of their dialogue needs to pass the literalism test.

YOUR ANSWER

Have they said anything in your draft that technically breaks that constraint?

Read their dialogue line by line. If you find a statement that is factually false, it needs to be rephrased. Pay special attention to romantic scenes, where characters under truth constraints might say “I don’t care about you” or “You mean nothing to me” when the opposite is true.

YOUR ANSWER

How can you rephrase it as a question, omission, or technical truth?

“I don’t want you” becomes “Do you think I want this?” (question). “I feel nothing” becomes silence or a subject change (omission). “You’re safe” becomes “No one will harm you while I’m here” (technically true, different implication).

YOUR ANSWER

The Sacrificial Reset

There comes a point when a character becomes so powerful that there's no longer enough tension in the story. At that point, you have to remove something from them. It can be a very blunt instrument, but when used with emotional force, it works well.

By the time *A Court of Silver Flames* is finished, Nesta Archeron has both the ability of death, as well as control over silver fire which, in theory, would allow her to fix every possible problem in the future. Maas handles this by having Nesta intentionally turn over all of her power to the Cauldron, so that she may save her sister and her unborn child. The reset through voluntary sacrifice works because it's based on a character choice rooted in love, rather than an external constraint being placed upon the character.

The writing lesson here: if you're going to remove power from your character, make the removal a *choice* that defines who they are. Removing power from a character involuntarily makes it appear as though you as the author have removed their strength. When a character sacrifices their own power for someone they love, it can feel like the culmination of a character's journey.

Before you use this technique, check two things:

1. Has the character had at least one moment of genuine mastery with their power? Readers need to see what the power can do at full strength before they'll accept it being given up. If the character never gets to be powerful, the sacrifice feels hollow.
2. Does the sacrifice serve the romance, not just the plot? In Nesta's case, the sacrifice is an act of love for her sister. That's what makes it emotionally satisfying rather than mechanically convenient.

Is any character in your story too powerful for the stakes to feel real?

If your protagonist or love interest could solve every problem with their magic, your romantic obstacles dissolve. There's no tension in "will they survive?" if the answer is obviously yes.

YOUR ANSWER

What could they sacrifice, and for whom?

The most emotionally powerful sacrifices in romantasy are for the love interest or for someone the love interest cares about. Nesta sacrifices her power for Feyre. The sacrifice serves the romance because it proves the depth of feeling that Nesta spent the whole book denying.

YOUR ANSWER

Does the sacrifice come from love, duty, or plot mechanics?

If the answer is "plot mechanics," reconsider. Readers can tell the difference.

YOUR ANSWER

The Perspective Upgrade

Sometimes you need to change a character's origin, nature, or history after you've already established something different. The fix: give your narrator a new way of seeing.

In *A Court of Wings and Ruin*, Feyre notices for the first time that Lucien resembles Helion, the High Lord of the Day Court, rather than Beron, the High Lord of the Autumn Court. Readers wouldn't have been able to pick up on this detail earlier because Feyre didn't have the "spell-cleaving" vision that Helion's power grants her. The parentage was always true; Feyre simply didn't have the correct lens to see it until then.

If you need to change a character's backstory or reveal a hidden nature, you can grant your narrator a new capability (magical, emotional, or simply experiential) that lets them see what was always there. The contradiction becomes a moment of growth.

What do you need your narrator to see differently?

In romantasy, this is often about the love interest. Your narrator saw them one way; now they need to see the truth. What changes their perception: the bond deepening, a new magical ability, or simply spending enough time together to see past the mask?

YOUR ANSWER

What new lens could make that possible?

A magical ability, a new perspective gained through experience, the bond revealing something it previously concealed, or a piece of information that reframes what they've already observed?

YOUR ANSWER

Can you establish this lens before the scene where they need it?

The lens should feel like character growth, not a plot device. If it's a magical ability, let them struggle with it before it becomes useful. If it's emotional growth, show the incremental shifts.

YOUR ANSWER

Choosing Your Fix

Not every inconsistency needs the same tool. Here's a quick reference for matching the problem to the technique:

TYPE OF INCONSISTENCY	BEST TECHNIQUE	EXAMPLE
A power or ability appears that wasn't set up	Second-Draft Seeding	Plant hints at 15-20% and midpoint; add a minor struggle scene
Your world has outgrown its original mythology	The Ignorance Shield	Frame early worldbuilding as narrator's limited understanding
A truth-constrained character said something false	Linguistic Literalism	Rephrase as question, omission, or technical truth
A character is too powerful for stakes to hold	The Sacrificial Reset	Have them choose to give up power for someone they love
A character's origin or nature needs to change	The Perspective Upgrade	Give the narrator a new lens that reveals what was always there
A historical date, timeline, or fact contradicts earlier chapters	The False History	Reveal the "history" was written by the winners or the propagandists

Your most pressing consistency problem:

The one that, if a reader caught it, would make them stop trusting your world and your romance.

YOUR ANSWER

Which technique fits?

WHICH TECHNIQUE FITS?

What specific changes do you need to make, and where in the manuscript?

Be concrete: “Add a line in Ch. 5 where [character] notices [detail]” is better than “foreshadow the reveal earlier.”

YOUR ANSWER

Catching and Fixing Errors

What specific consistency questions will you ask your beta readers?

Generic “did you like it?” feedback won’t catch consistency problems. You need targeted questions that direct readers to the exact areas where your world’s logic might break. Write 3-5 questions based on the problems you identified in this section. The best beta reader questions are specific enough to direct attention but open enough not to lead the answer. “Did the travel time feel consistent?” is better than “Did you notice the travel time changed in chapter twelve?”

YOUR CONSISTENCY RISK	BETA READER QUESTION
<i>Magic costs suddenly change in the love scene (Ch. 14)</i>	<i>"In the scene where [character] uses magic in Ch. 14, did the cost feel consistent with how magic worked earlier? Did anything pull you out of the moment?"</i>

Pay special attention to romantic scenes when writing your questions. These are the moments where readers are most emotionally engaged but also most likely to notice when rules bend. A beta reader who flags "I didn't believe they could be alone here" is catching a selective enforcement problem.

Series Consistency

Create a Series Bible

If you're writing a series, you need a living document that tracks every promise you've made to your readers. The longer the series, the more critical this becomes. Readers who've followed your world across multiple books will remember details you've forgotten — especially details about the romance.

Document and maintain:

Magic rules and limitations:

Include any rules that have evolved or been revealed across books. Note which book established each rule.

YOUR ANSWER

Travel times between key locations:

These are among the easiest inconsistencies for readers to spot across a series. If a journey takes three weeks in Book One, it should take three weeks in Book Three.

YOUR ANSWER

Political structures and current power holders:

Track who holds power at the end of each book. Power shifts are often tied to romantic stakes — a new ruler might change everything about whether the relationship is forbidden or permitted.

YOUR ANSWER

Character abilities and their established limits:

Note any power growth, sacrifices, or new abilities gained across books. Readers track power levels closely.

YOUR ANSWER

Romantic relationship progression and bond mechanics:

Track where the relationship stands at the end of each book: what's been confessed, what's still secret, what physical or magical bonds are active, and what rules govern those bonds. If a mating bond behaves one way in Book One, it should behave the same way in Book Three unless you've established why it's changed.

YOUR ANSWER

Major worldbuilding facts that can't change:

MAJOR WORLDBUILDING FACTS THAT CAN'T CHANGE:

Will you need a series bible?

If you're writing more than one book in this world, the answer is almost certainly yes. Even if you think you'll remember everything, you won't. Start it now, while this workbook's answers are fresh.

YOUR ANSWER

The Consistency Checklist

Use this checklist for any major plot point or romantic beat. If you can check every box, the scene is consistent. If you can't, go back to the relevant section above.

- ☐ Does this follow established magic rules?
- ☐ Does this follow established political and legal rules?
- ☐ Are environmental conditions consistent with previous scenes?
- ☐ Do characters have only the knowledge and abilities they should have at this point?
- ☐ Are authority figures and obstacles present as established (or absent for a specific, in-world reason)?
- ☐ Does external plot pressure continue during this scene?
- ☐ If a rule is bent or broken, is there a clear in-world reason established *before* the scene?
- ☐ Would a reader who's been paying attention accept this scene without asking "wait, but what about...?"

Quick Reference: Your Consistency Priorities

Rules that absolutely must hold (break these and readers lose trust):

These are the promises your entire romance depends on. The cost of magic, the law that forbids their union, the bond's mechanics, the physical danger that forces them together.

YOUR ANSWER

Rules you can bend slightly (as long as bending is consistent):

Minor timing, background details, vague power levels. These can flex if the emotional story is strong enough.

YOUR ANSWER

Consequences that must happen if rules are broken:

What's the worst thing that happens if your characters get caught? This consequence should be specific, not vague. Name it.

YOUR ANSWER

The biggest consistency risk in your story right now:

The scene, rule, or plot point you're most worried about. The one where you know a careful reader might say "wait, but what about...?"

YOUR ANSWER

Final Thought

Your world can be unrealistic, but it has to be consistently built. It's fantasy! Those rules set the boundaries on choices, and boundaries are what make choices meaningful.

If characters break the rules, it should come at some expense. If they operate inside the rules you've established, their successes should feel earned. When the impossible becomes possible, there should be a moment of wonder, not convenience.

The romance will be stronger for it. A strong romantic relationship that overcomes real challenges based on consistent worldbuilding will be much more powerful than one where the obstacles are simply eliminated as needed. Each reader who finishes a romantasy and says "I believed in them" is essentially saying "I believed in the world that was trying to tear them apart, and I believed they fought for each other."

Create a world based on rules. Enforce them. Then allow your characters to fight for each other within those rules.

That's how you earn the happy ending.
